

QASAIR®
RANGEHOODS

Harvey Norman™

Made in **Australia**

QASAIR Rangehood HNR Under Cupboard Hood

The HNR Rangehoods come in 3 models - **HNR 60L-1**, **HNR 90L-1** and the **HNR 90L-2** from Qasair. With a depth of 280mm, these are suitable for all cabinetry situations.

QASAIR Rangehoods are designed to suit the Australian lifestyle and enhance every kitchen. Qasair Rangehoods are designed to work effectively over domestic cookware available in **Australia**. Not suitable over induction cooktops.

Qasair have all the features you require in a rangehood for **modern day cooking** appliances to suit Australian cooking.

- Made in Type 304 Stainless Steel
- Incorporates a powerful 4 pole motor which ensures low noise level
- Qasair Rangehoods with one motor have an air movement from **450 to 900 cubic metres per hour** and with two motors up to 1800 cubic metres per hour
- Qasair rangehoods have LED Strip lights and incorporate a night light.

Qasair Rangehoods feature the two necessary factors:

- Unequalled performance with **high air movement**
- **Extremely low noise** level.

QASAIR Rangehood HNE Under Cupboard Hood

QASAIR Rangehoods presents **Models HNE 60L-1, HNE 90L-1, HNE 90L-2 and HNE 120L-2**. These models are deeper at 380 mm and have a **larger filter** area which caters for many new cooktops available on the market now.

These rangehoods can be installed at 600 mm above a cooktop, however we recommend they be put at 750 mm if going over a deeper bench top particularly if the hotplate is a high speed gas, electric incorporating a wok burner or an induction hotplate.

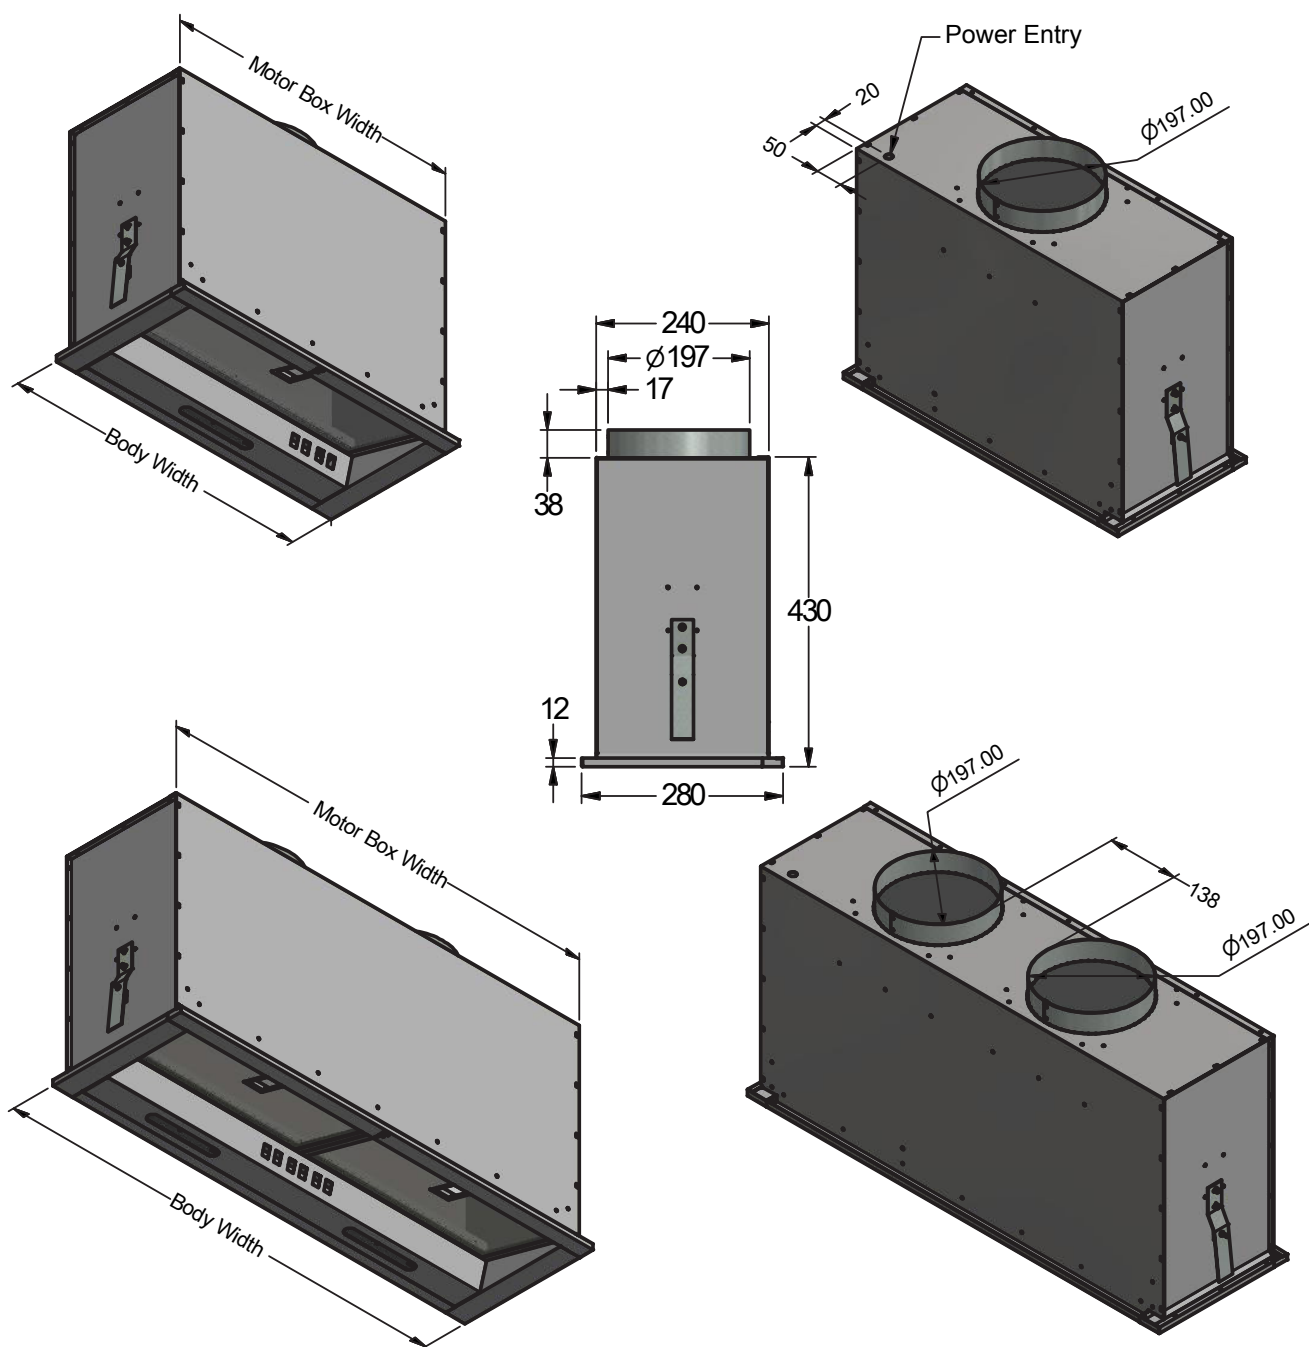

Qasair will **effectively remove heat, grease and odours** from the kitchen – thus protecting soft furnishings from lingering odours and the surrounding cabinetry from grease.

Qasair strives to **resolve function and design issues**, ensuring customer satisfaction on all levels.

If you want **the best** - It has to be **QASAIR**.

To ensure the rangehood will do the job by removing all the by products of cooking such as smoke, steam and odours from the kitchen, it is important to duct the rangehood correctly.

Qasair rangehoods recommend that all rangehoods be ducted to the outside atmosphere. Ducting into the ceiling space can cause leakage of smoke and odours into other parts of the house through joins and light fittings, and can also be a dangerous fire hazard.

Where possible, ducting should be considered during the planning stage, or at least, frame stage.

Qasair Rangehoods are capable of extracting a lot of air from the kitchen. The Qasair motor will extract 900 cubic metres of air per hour and the two motors will extract 1800 cubic metres of air; therefore having the correct duct size is very important for a satisfactory result.

Some things to be careful of are:

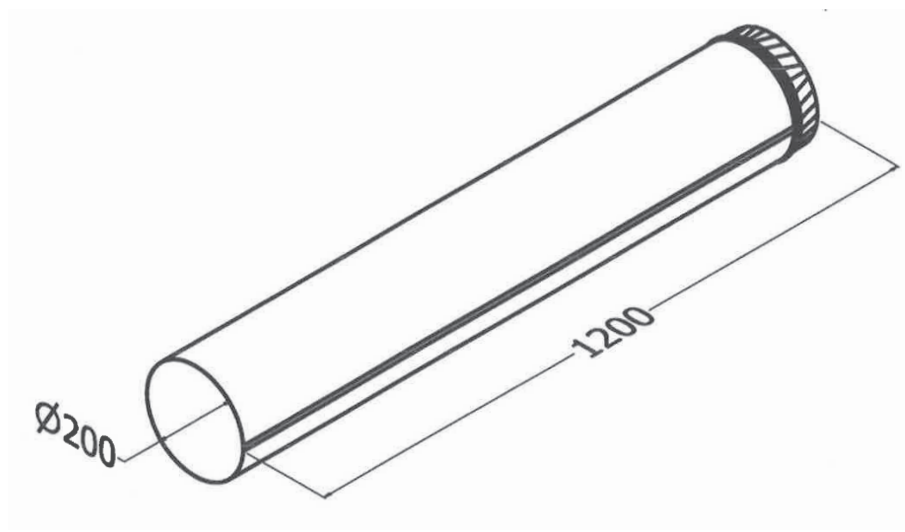

1. Long duct runs. If a long distance is needed, increase the size of the duct.
2. All bends should be streamlined as a 90 degree bend can reduce efficiency by 20%.
3. Do not reduce the size of the duct as this can cause the motor to fail.
4. Do not use flexible tubing as eddies are caused along the sides and can reduce air flow by up to 40%.
5. If the cooking appliance is over 1000 mm wide, we recommend two motors.
6. Use non-flammable ducting.

Qasair Rangehoods are manufactured in Australia, Ringwood 3134.

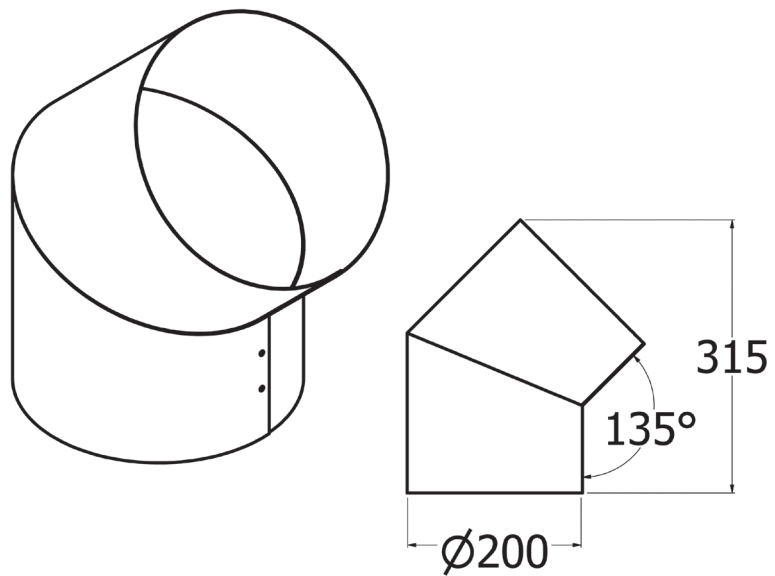

If it has to be the best – It has to be QASAIR.
